### DETAILED ACTION

1. Applicant's response filed 12/13/05 has been received and considered. Claims 1-10 are pending.

#### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0768224 ('224) in view of Shaw.

Regarding claim 1 EP '224 shows in figure 6 a device similar to applicants. Note the force sensor assembly at 60. On page 5 it is stated that the spring can have a non-linear spring characteristic.

Lacking is a specific showing of the rotatable connection of the spring to the sensor and the brake arm.

However such a connection is known in the art (and would have been obvious to limit unwanted friction between the end of the spring and the arm and sensor).

The reference to Shaw in figure 4 shows such a connection generally at 11.

It would have been obvious to have modified EP '224, as taught by Shaw, for the reason above.

Regarding claim 2 to provide a protective housing for the spring of EP '224, as taught by Shaw would have been obvious. Note the piston at 45 (travel mechanism) which compresses the spring.

Regarding claims 3-10 these limitations are fairly taught by the combined teachings of the references above and what is known in the art. Although not applied see the well known spring arrangements of Wulff, Tilden and Zuccihini. Note that any one of these spring arrangements could be adapted for use with EP '224 since the EP reference is not specific to the spring arrangement as shown in the several embodiments and as discussed previously.

### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1-10 have been considered but are moot in view of the new ground(s) of rejection.
